Program output during model building:

```
----- Training started on 30110 examples with pruning = False. -----  
----- Finished training. -----  
----- Training started on 30110 examples with pruning = True. -----  
----- Finished training. -----  
----- Training started on 14 examples with pruning = False. -----  
----- Finished training. -----
```

Program output when running testing function:

```
----- TESTING STARTED -----  
  
Number of testing examples: 15028  
Correct classificaton count: 12087  
Incorrect classification count: 2941  
Accuracy = 80.42986425339367%  
  
----- TESTING ENDED -----  
  
----- TESTING STARTED -----  
  
Number of testing examples: 15028  
Correct classificaton count: 12297  
Incorrect classification count: 2731  
Accuracy = 81.82725578919352%  
  
----- TESTING ENDED -----
```
